Canon LiDE 120 Skanlite Black Picture Error

Troubleshooting

There are technical errors that are just annoying. Hardware/Linux bugs belong (in my personal opinion) to this category. If you have installed [Skanlite](#) and connect your scanner, but after a test only a black image is displayed, you have to install the [repository from Rolf Bensch](#).

```
sudo add-apt-repository ppa:rolfbensch/sane-git  
sudo apt-get update
```

This will solve your problem very quickly and easily and please don't listen to any voodoo computer scientists who give you superfluous and stupid advice. It could all be so easy if stupid people didn't always talk so much nonsense.
